

IDABUS Reporting

Efficient Reporting for your Successful Audit

Reports are the foundation of a successful audit strategy. They provide critical information for sound audits. For example, good reporting can identify who had certain privileges at a particular time, or what changes someone made during a particular period.

It allows complex data to be presented in a clear and understandable way to analyse the current audit situation and identify future trends. This allows strategic audit decisions to be made and future developments to be identified at an early stage.

Tailored reporting is essential as each organisation has unique requirements. Flexibility allows you to focus on specific audit-relevant aspects.

Examples range from IT authorisations to compliance analysis. Reports can be generated without programming, making the process efficient.

Linking reports creates synergies and enables deeper insight. Workflows can also be implemented directly.

Invest in a powerful reporting solution and lay the foundations for a successful audit. Contact us today to find out more.

Optimise your Reporting with us!

Get the information you need, when you need it. Our IDABUS reporting tool allows you to create on-demand reports based on both current and historical data.

Use a wide range of predefined report templates and customise them to meet your specific needs. Whether it's checking specific permissions or monitoring compliance.

Track changes, analyse group affiliations or plan onboarding processes more efficiently. Create new reports without coding.

Drill down into data and links between reports to gain a deeper understanding of complex relationships. Run workflows directly on selected report data for seamless process integration.

And for easy sharing and archiving, easily export report data as PDF or CSV.

Discover a variety of report templates that can be customised to suit your needs, including:

- Which groups (roles, OUs, permissions, ...) were assigned to a specific user at time X?"
- Who had a specific authorisation at time X?"
- Which users have an account name that does not comply with the compliance guidelines?
- Which groups have more than 1000 members?
- What changes has a particular user made in the last two months?
- For which users will an onboarding process be started within the next 30 days?

WELL-DESIGNED REPORTING IS CRITICAL TO EFFECTIVE AUDITING. IT PROMOTES DATA-DRIVEN DECISION MAKING AND LAYS THE FOUNDATION FOR SUSTAINABLE AUDIT SUCCESS.
